Science home learning 3rd March 2021

Where does the rain go when it falls on a plant? Have a look at the video below to explore what happens. How many different leaves can you recognise? What do you notice about the water on the leaves?

<https://explorify.wellcome.ac.uk/en/activities/whats-going-on/wet-and-not-so-wet-leaves/classroom>

Hands-on activity: Explore any plants you have in your home – or outdoors! Can you work out what would happen to any water on the surface of the leaves? Why not test your ideas with a few drops of water (you might want to do this over the kitchen sink or in the bathroom if you cannot go outdoors).

Please ask an adult to help.

It would be great if you could send a photograph of some of the plants you have explored.

Thank you ☺
